                                                                                                                                                                                                                                                                                                                                                                       Composition for treating hormone-regulated cancer, particularly of prostate or breast, comprises oligonucleotide antisense to insulin-like growth factor binding protein-2.
                                                                                                                                                                                                                                                                                                                                                                                                                                          WPI; 2002-339861/37.
                                                                                                                                                                  of hormone-regulated tumours, particularly of breast or prostate, to the hormone-independent state, to delay metastatic progression to the bone of IGF-1-sensitive cancers and to treat hormone-responsive cancers by inducing apoptosis, after hormonal withdrawal. The present nucleic acid sequence represents one of a collection (ABK70313-ABK70375) of antisense IGFBP-2-oligodeoxynucleotides (ODN) that were used in the invention for
                                                                                                                                                                                                                                                          The present invention relates to a new composition for treating hormone-regulated cancer. The composition comprises an antisense oligonucleotide that inhibits expression of IGFBP-2 (insulin-like growth factor binding protein-2). The molecules of the invention are used to delay progression
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  13-SEP-2001; 2001WO-US028748.

                                                                                                                                                This invention comprises a method of purifying double-stranded DNA from a solution containing the double-stranded DNA mixed with other components, comprising passing the solution through a support comprising a covalently coupled oligonucleotide capable of forming a triple helix with the double stranded DNA by hybridisation with a specific sequence present in the double-stranded DNA. The method is useful for purifying double-stranded DNA contained in a solution and mixed with other components. The new method is a simple, rapid and effective method for DNA purification, and makes it possible to obtain especially high purities with high yields. The method enables DNA to be purified from complex mixtures comprising other nucleic acids, proteins, endotoxins, nucleases and the like. The supports may be readily recycled, and the DNAs obtained display improved properties to pharmaceutical safety. Further, the method entails only one step contrary to prior art. The present sequence represents a DNA hybridisation sequence used to prepare a DNA purification column to purify the plasmid pXL2727-2 using the method of the invention
                                                                         Query Match

The method is used for detecting abnormalities in a COLI or COL9 gene is useful for CC determining whether a subject is afflicted with pathological conditions CC associated with an altered collagen gene such as osteoporosis, multiple epiphyseal dysplasia, osteogenesis imperfecta, shortness of stature and CC low bone density. Identification of an abnormality in a collagen gene is also useful for designing a therapeutic nucleotide or gene therapy agent which can be administered to the subject to correct or alleviate the CC abnormality. The method is useful for detecting mutations in both the CC coding and non-coding sequences of any of the COL1 or CD19 genes.

CC Therefore the method can be used to detect collagen gene alterations which affect either the primary sequence of a collagen protein chain, splicing of the mRNA encoding such chains or regulation of the invention of the genes encoding such chains. The present sequence is a PCR primer which amplifies a nucleic acid from a collagen gene of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   RESULT 1747
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Query Match
                                                                                                           prostate or breast, comprises or growth factor binding protein-2.

                         The present invention relates to a new composition for treating hormone-regulated cancer. The composition comprises an antisense oligonucleotide that inhibits expression of IGFBP-2 (insulin-like growth factor binding protein-2). The molecules of the invention are used to delay progression of hormone-regulated tumours, particularly of breast or prostate, to the hormone-independent state, to delay metastatic progression to the bone of IGF-1-sensitive cancers and to treat hormone-responsive cancers by inducing apoptosis, after hormonal withdrawal. The present nucleic acid sequence represents one of a collection (ABK70313-ABK70375) of antisense IGFBP-2-oligodeoxynucleotides (ONN) that were used in the invention for prostate and other endocrine tumour therapy
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Composition for treating hormone-regulated cancer, particularly of prostate or breast, comprises oligonucleotide antisense to insulin-like growth factor binding protein-2.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Hormone-regulated cancer; antisense oligonucleotide; IGFBP-2; insulin-like growth factor binding protein-2; hormone-regulated tumour; breast cancer; prostate cancer, IGF-1-sensitive cancer; apoptosis; hormone-responsive cancer; hormonal withdrawal; oligodeoxynucleotide;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The present invention relates to a new composition for treating hormone-regulated cancer. The composition comprises an antisense oligonucleotide that inhibits expression of IGFBP-2 (insulin-like growth factor binding protein-2). The molecules of the invention are used to delay progression of hormone-regulated tumours, particularly of breast or prostate, to the hormone-independent state, to delay metastatic progression to the bone of IGF-1-sensitive cancers and to treat hormone-responsive cancers by inducing appticals, after hormonal withdrawal. The present nucleic acid sequence regresents one of a collection (ABK70313-ABK70375) of antisense IGFBP-2-oligodeoxynucleotides (ODN) that were used in the invention for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               13-SEP-2001; 2001WO-US028748
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Synthetic

The OmpA protein can be expressed by standard recombinant methodology. An antibody (Ab) specific to the OmpA polypeptide is useful for diagnosting an infection by R. anatipestifer in an avian species. The OmpA gene and protein are useful for the preparation of vaccines and serodetective diagnostic assays. A vaccine composition comprising the OmpA gene, protein or Ab is useful for effective immunization of poultry against R. anatipestifer infection, especially septicemia anserum exception. Sequences AC85124-139 represent PCR primers used for
       The invention relates to Detecting a collagen gene alteration associated with a pathological condition in a human subject by obtaining from the subject a sample nucleic acid containing a portion of at least 15 consecutive nucleotides of the segment of the COLLA1 gene extending in the 5' to 3' direction from 78 nucleotides of intron 27 located adjacent exon 28 through the 3' end of intron 51 where the portion contains an
                                                                                                                                  Detecting collagen gene alteration, useful for diagnosing osteoporosis, multiple epiphyseal dysplasia, osteogenesis imperfecta, shortness of stature and low bone density in humans.
                                                                                                                                                                                                                                                                                       (UYAL-)

and a first

and second site,

The invention relates to Detecting a collagen gene alteration with a pathological condition in a human subject by obtaining

from associated

with a pathological condition in

Detecting collagen gene alteration, useful for diagnosing osteoporosis, multiple epiphyseal dysplasia, osteogenesis imperfecta, shortness of stature and low bone density in humans.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              of the portion and comparing the sequence of the portion with the corresponding consensus sequence of the COLLAI gene where a difference between the sequence of the portion and the consensus sequence indicates the presence of the collagen alteration in the subject. The method is used for detecting abnormalities in a COLI or COL9 gene is useful for determining whether a subject is afflicted with pathological conditions associated with an altered collagen gene such as osteoprosis, multiple epiphyseal dysplasia, osteogenesis imperfecta, shortness of stature and low bone density. Identification of an abnormality in a collagen gene is also useful for designing a therapeutic nucleotide or gene therapy agent which can be administered to the subject to correct or alleviate the abnormality. The method is useful for detecting mutations in both the coding and non-coding sequences of any of the COLI or COL9 genes.

Therefore the method can be used to detect collagen gene alterations which affect either the primary sequence of a collagen protein chain, splicing of the method can be used to categories as portion of the genes encoding such chains or regulation of expression of the genes encoding such chains or regulation of expression of the genes encoding such chains or regulation of expression of the genes encoding such chains or regulation of expression of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Matches

This protein contains amino acids 1-662 of hPARPI fused upstream of amino acids 230-533 of hPARP2. The fusion protein coding sequence is given in AAC85341. The protein of the invention, hPARP2, causes the covalent addition of polymers of ADP-ribose to protein targets. hPARP2 activity is induced in many instances of oxidative stress or during inflammation where there is direct damage to the DNA. hPARP2 may be used to identify antagonists which may be used to treat a human having a disorder mediated by PARP2 activity, such as, inflammatory, neurological, cardiovascular, or neoplastic tissue growth disorders. hPARP2 and antibodies to it, can also be used to itssue growth disorders.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     chronic glomerulonephritis; inflammatory bowel disease; Crohn's disease; ulcerative colitis; necrotizing enterocolitis; inflammatory dermatosis; contact dermatitis; atopic dermatitis; psoriasis; urticaria; fever; myalgia; meningitis; encephalitis; Sjogren's syndrome; alcoholic hepatitis; bacterial pneumonia; hypovolemic shock; Type 1 diabetes mellitus; hypersensitivity; leukocyte dyscrasia; thermal injury; cytokine-induced toxicity; expressed sequence tag; EST; RACE; PCR; amplify; primer; polymerase chain reaction; ss

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The invention relates to the use of restriction fragment length polymorphism (RFLP) analysis to distinguish between various breeds of pig. RFLP analysis is carried out on the melanocyte-stimulating hormone receptor gene (MC1-R gene; ARF27046-ARF27049) and the c-KIT gene (ARF27066-AAF27076). The method of the invention is used for distinguishing between coloured pig breeds including Hampshire, Berkshire, Meishan, Monkai and burcock breeds, and between white pig breeds, including Landrace and large Yorkshire breeds. The method can distinguish between a wide variety of pig breeds. The present sequence represents a pig c-KIT gene PCR primer used in an exemplification of the

                                                                                                                                                                                                                   CC includes kits for determining the presence of a SNP, using the CC includes kits for determining the presence of a SNP, using the CC oligonucleotides of the invention. The PCR primers are used to amplify a CC SNP flanking sequence, the SNPE primer is used as a genotyping primer. CC The oligonucleotides are useful for genotyping a nucleic acid sample by CC performing a single-nucleotide primer extension reaction. The CC oligonucleotides are useful for determining the presence, absence or CC oligonucleotides are useful for determining the presence, absence or CC identity of a SNP and for genotyping nucleic acid samples, for e.g. to CC assess by association analysis the genotype of an individual or group of CC individuals, having a pathological phenotypic trait suspected of being CC aused by one or more SNPs. Phenotypic traits include diseases e.g. CC agammaglobulinaemia, diabetes insipidus, Lesch-Nyhan syndrome, muscular CC disease of include symptoms of or susceptibility to multifactorial CC traits also include symptoms of or susceptibility to multifactorial CC disease of which a component is or may be genetic such as autoimmune CC diseases, including, rheumatoid arthritis, multiple sclerosis, CC inflammation, cancer, nervous system diseases and infection by pathogenic CC microorganism. The method is also useful in forensic investigations and CC microorganism. The method is also useful in forensic investigations and CC for a human SNP containing NNA sequence
                                                                                     Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Sequences AAH37205 - AAH40944 represent PCR primers, single nucleotide primer extension (SNPE) primers, and the sequences of regions flanking sites of single nucleotide polymorphisms SNPs. The present invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            New genotyping oligonucleotide, useful for detecting the presence, absence or identity of single polynucleotide polymorphism in a nucleic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  SNPE; genotyping; agammaglobulinaemia; diabetes insipidus; cancer; Lesch-Nyhan syndrome; muscular dystrophy; familial hypercholesterolaemia; polycystic kidney disease; osteogenesis imperfecta; autoimmune disease; acute intermittent porphyria; rheumatoid arthritis; multiple sclerosis;
                                                                                                                                                                   Sequence 21
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Claim 1; Page 67; 83pp; English.

                        The present invention provides a method of diagnosing a vascular disease in an individual, involving determining the sequence at various polymorphic sites within the human thrombospondin 1 and thrombospondin 4 genes. The sequences at a number of polymorphic sites are also provided in the specification. In particular, the method can be used in the diagnosis of atherosclerosis, myocardial infarction, coronary heart disease, stroke, peripheral vascular disease, venous thromboembolism and pulmonary embolism. Single nucleotide polymorphisms (SNPs) are also useful in forensics, paternity testing, genetic analysis and phenotype correlations to diseases. The present sequence is an example of one of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         pulmonary embolism. Single nucleotide polymorphisms (SNPs) are also useful in forensics, paternity testing, genetic analysis and phenoty correlations to diseases. The present sequence is an example of one the human gene SNPS shown in the specification
                                                                                                                                                                                                                                                                                                                                                                               Nucleic acids comprising single nucleotide polymorphisms, useful in applications such as forensics, paternity testing, medicine, genetic analysis and phenotype correlations to diseases such as diabetes and atherosclerosis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          (WHED )

                                                                                                                       The invention relates to oligonucleotides used in a method for the detection of the pseudorables virus in a tissue sample from an animal, particularly a pig. The method involves the detection of a 674 bp fragment of the gII gene (AAH78656) in a purified nucleic acid sample derived from the tissue via a nested PCR reaction using primers selected from AAH78657-AAH78666. Pseudorables virus is a herpes virus found primarily in the swine population, and in its active state causes a disease that is generally fatal to young pigs. The gII gene encodes a glycoprotein that is essential for pseudorables virus replication in the host. The present sequence represents an inner PCR primer which anneals to nucleotides 836-856 of the pseudorables virus gII gene sequence and which is claimed for use in the method of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      gII gene; herpes virus; PCR primer; optimised nested PCR reaction; gII g pseudorables virus detection.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Sequence

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The present invention provides a method of diagnosing a vascular disease in an individual, involving determining the sequence at various polymorphic sites within the human thrombospondin 1 and thrombospondin 4 genes. The sequences at a number of polymorphic sites are also provided in the specification. In particular, the method can be used in the diagnosis of atherosclerosis, myocardial infarction, coronary heart disease, stroke, peripheral vascular diseases, venous thromboembolism and pulmonary embolism. Single nucleotide polymorphisms (SNPs) are also useful in forensics, paternity testing, genetic analysis and phenotype correlations to diseases. The present sequence is an example of one of the human gene SNPS shown in the specification
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Human; variant thrombospondin 1; variant thrombospondin 4; SNP; polymorphism; vascular disease; coronary artery disease; forensics; myocardial infarction; atherosclerosis; stroke; venous thromboembol pulmonary embolism; paternity test; ds.
                                                                                                                                                                                                   Nucleic acids comprising single nucleotide polymorphisms, useful in applications such as forensics, paternity testing, medicine, genetic analysis and phenotype correlations to diseases such as diabetes and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Sequence 21
                                                                                                                                                                                                                                                                                                                                                                                                                                            (WHED )

The present invention provides a method of diagnosing a vascular disease in an individual, involving determining the sequence at various polymorphic sites within the human thrombospondin 1 and thrombospondin 4 genes. The sequences at a number of polymorphic sites are also provided in the specification. In particular, the method can be used in the diagnosis of atherosclerosis, myocardial infarction, coronary heart disease, stroke, peripheral vascular diseases, venous thromboembolism and

thromboembolism and

The sequences at a number of polymorphism. In the specification. In particular, the method can be used in the diagnosis of atherosclerosis, myocardial infarction, coronary heart disease, stroke, peripheral vascular disease, venous thromboembolism a pulmonary embolism. Single nucleotide polymorphisms (SNPs) are also useful in forensics, patternity testing, genetic analysis and phenotype correlations to diseases. The present sequence is an example of one of the human gene SNPS shown in the specification
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          10-SEP-1999;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The present invention provides a method of diagnosing a vascular disease in an individual, involving determining the sequence at various polymorphic sites within the human thrombospondin 1 and thrombospondin 4 genes. The sequences at a number of polymorphic sites are also provided in the specification. In particular, the method can be used in the diagnosis of atherosclerosis, myocardial infarction, coronary heart disease, stroke, peripheral vascular diseases, venous thrombosmbolism and pulmonary embolism. Single nucleotide polymorphisms (SNPs) are also useful in forensics, paternity testing, genetic analysis and phenotype correlations to disease. The present sequence is an example of one of

The sequences at a number of polymorphic sites are also provided in the specification. In particular, the method can be used in the diagnosis of atherosclerosis, myocardial infarction, coronary heart disease, stroke, peripheral vascular diseases, venous thrombosembolism and pulmonary embolism. Single nucleotide polymorphisms (SNPs) are also useful in forensics, paternity testing, genetic analysis and phenotype correlations to diseases. The present sequence is an example of one of the human gene SNPS shown in the specification

                                                                                                                                                                                                                                                                Human; variant thrombospondin 1; variant thrombospondin 4; SNP; polymorphism; vascular disease; coronary artery disease; forensics; myocardial infarction; atherosclerosis; stroke; venous thromboembolism; pulmonary embolism; paternity test; ds.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The present invention provides a method of diagnosing a vascular disease in an individual, involving determining the sequence at various polymorphic sites within the human thrombospondin 1 and thrombospondin 4 genes. The sequences at a number of polymorphic sites are also provided in the specification. In particular, the method can be used in the diagnosis of atherosclerosis, myocardial infarction, coronary heart disease, stroke, peripheral vascular diseases, venous thrombosmbolism and pulmonary embolism. Single nucleotide polymorphisms (SNPs) are also useful in forensics, paternity testing, genetic analysis and phenotype correlations to diseases. The present sequence is an example of one of the human gene SNPS shown in the specification
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Nucleic acids comprising single nucleotide polymorphisms, useful in applications such as forensics, paternity testing, medicine, genetic analysis and phenotype correlations to diseases such as diabetes and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Sequence 21
                                                                                                                                                                                                                                          Homo
                                                                                                                                                                                                                                                                                                                                       Human gene single nucleotide polymorphism #822.
                                                                                                                                                                                                                                                                                                                                                                     06-JUN-2001

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The present invention provides a method of diagnosing a vascular disease in an individual, involving determining the sequence at various polymorphic sites within the human thrombospondin 1 and thrombospondin 4 genes. The sequences at a number of polymorphic sites are also provided in the specification. In particular, the method can be used in the diagnosis of atherosclerosis, myocardial infarction, coronary heart disease, stroke, peripheral vascular diseases, venous thromboembolism and pulmonary embolism. Single nucleotide polymorphisms (SNPs) are also useful in forensics, paternity testing, genetic analysis and phenotype correlations to diseases. The present sequence is an example of one of the human gene SNPS shown in the specification

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The present invention provides a method of diagnosing a vascular disease in an individual, involving determining the sequence at various polymorphic sites within the human thrombospondin 1 and thrombospondin 4 genes. The sequences at a number of polymorphic sites are also provided in the specification. In particular, the method can be used in the diagnosis of atheroscierosis, myocardial infarction, coronary heart disease, stroke, peripheral vascular disease, venous thrombosembolism and pulmonary embolism. Single nucleotide polymorphisms (SNPs) are also useful in forensics, paternity testing, genetic analysis and phenotype correlations to diseases. The present sequence is an example of one of the human gene SNPS shown in the specification
                                                                                                                                                                                                                                    Human

                                                                                                                                                                                                                                                                                                                               The present invention provides a method of diagnosing a vascular disease in an individual, involving determining the sequence at various polymorphic sites within the human thrombospondin 1 and thrombospondin 4 genes. The sequences at a number of polymorphic sites are also provided in the specification. In particular, the method can be used in the diagnosis of atherosclerosis, myocardial infarction, coronary heart disease, stroke, peripheral vascular diseases, venous thromboembolism and pulmonary embolism. Single nucleotide polymorphisms (SNPs) are also useful in forensics, paternity testing, genetic analysis and phenotype correlations to diseases. The present sequence is an example of one of the human gene SNPS shown in the specification
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Nucleic acids comprising single nucleotide polymorphisms, useful in applications such as forensics, paternity testing, medicine, genetic analysis and phenotype correlations to diseases such as diabetes and

                                                                                                                                                                                                                                                                                                                                                                                                       묽
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The invention relates to a substantially purified or isolated nucleic CC acid (I) from ryegrass or fescue species including a simple sequence CC repeat (SSR), having 2 or more tandemly repeated nucleotide core elements CC 2-6 nucleotides in length. Also included are a nucleot acid primer CC suitable for amplifying an SSR, identifying (M1) an SSR by preparing a CC library of ryegrass or fescue genomic DNA enriched for SSRs and CC identifying clones in the library containing SSRs, a library of ryegrass or crease breeding by identifying an SSR that is closely CC associated with the gene such that the SSR and the gene are CC preferentially co-inherited, and selecting for the SSR in the breeding, a CC method for DNA profiling grass or creal species varieties by assessing cariation between SSR varieties and testing the purity of grass or cereal section of genes in grass or cereal breeding, for CC may be used in the selection of genes in grass or cereal section, for testing the purity of grass or cereal sections of genes in grass or cereal section of genes in grass or cereal breeding, the CC grass or cereal section of genes in grass or cereal breeding, for CC profiling grass or cereal section of genes in grass or cereal breeding, for CC grass or cereal section of genes in grass or cereal breeding, for CC grass or cereal section of genes in grass or cereal breeding, for CC grass or cereal section of genes in grass or cereal breeding, for CC grass or cereal section of genes in grass or cereal breeding, core constitution the grass or cereal section of genes in grass or cereal breeding.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Matches

Single nucleuric particle professionally and phenotype useful in forensics, paternity testing, genetic analysis and phenotype correlations to diseases. The present sequence is an example of one of the human gene SNPS shown in the specification
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The present invention provides a method of diagnosing a vascular disease in an individual, involving determining the sequence at various polymorphic sites within the human thrombospondin 1 and thrombospondin 4 genes. The sequences at a number of polymorphic sites are also provided in the specification. In particular, the method can be used in the diagnosis of atherosclerosis, myocardial infarction, coronary heart disease, stroke, peripheral vascular diseases, venous thrombosmbolism and pulmonary embolism. Single nucleotide polymorphisms (SNPs) are also
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Nucleic acids comprising single nucleotide polymorphisms, useful applications such as forensics, paternity testing, medicine, generallysis and phenotype correlations to diseases such as diabetes

                                                                                                                                                                                                                                                                                                                                      ş
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The present sequence is a PCR primer used in the isolation of human CC polynucleotides which are useful in gene therapy, and for disgnosing a CC pathological condition or a susceptibility to it. In particular, the pathological condition or a susceptibility to it. In particular, the CC pathological condition or modulating gene expression in CC chromosome identification. The polynucleotides are useful for CC chromosome identification, controlling gene expression through triple CC helix formation or antisense DNA or RNA, or identifying individuals from CC minute biological samples using DNA-based identification techniques. The CC polynucleotides can also be used as an alternative to restriction CC fragment length polymorphism (RFLP), by determining the actual base-by-cc base DNA sequences of selected portions of an individual's genome. The CC polynucleotides may also be used as molecular weight markers on Southern CC polynucleotides may also be used as molecular weight markers on Southern CC polynucleotides, or as an antigen to pict an immune response. The CC polynucleotides or useful in diagnostic process of discovering novel CC polynucleotides are useful in diagnostic procedures to detect a disorder. CC The polynucleotides and polypeptides are useful for process of discovering treating or ameliorating immune system disorders, genetic disorders, cancers, some action of tissues, especially in wounds or burns. CC or preservative

                                                                                                                                                                                                                                                                                                                                                                                                                                       Ś
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The invention relates to a substantially purified or isolated nucleic CC acid (I) from ryegrass or fescue species including a simple sequence crepeat (SSR) having 2 or more tandemly repeated nucleotide core elements CC 2-6 nucleotides in length. Also included are a nucleit acid primer suitable for amplifying an SSR, identifying (M1) an SSR by preparing a CC library of ryegrass or fescue genomic DNA enriched for SSRs and CC elementifying clones in the library containing SSRs, a library of ryegrass or cereal breeding by identifying an SSR that is closely cassociated with the gene such that the SSR and the gene are comethod for DNA profiling grass or cereal seed batches by assessing variation within seed batche of an SSR. The SSRs or cereal seed batches by assessing variation within seed batch of an SSR. The SSRs can be used in the selection of genes in grass or cereal breeding, for compatible grass or cereal species variations or cereal species variations or cereal seed batches or cereal species variations or cereal seed batches or cereal seed batches, and for DNA profiling to setablish the company of the company of the purity of grass or cereal seed batches, and for DNA profiling to setablish the company of the compan

                                                                                                                                  identifying and localising dog genes, since it covers approximately 80 % of the dog genome and provides a dense map integrating different types (i.e. Type I and Type II) of markers. The map and the dog genome markers (or complementary sequences) are especially useful to identify genes responsible for phenotypic and behavioural traits in dogs, to identify morbid genes, to analyse diseases and identify implicated genes in such diseases and their alleles, and to study dog pedigrees. They may also be useful for isolating corresponding human gene sequences e.g. genes involved in genetic diseases
                                                                                                                                                                                                                                                                                                                                                               New radiation hybrid map of the dog, Canine familiaris, genome, useful for e.g. identifying genes implicated in phenotypic and behavioral traits or in genetic diseases and for studying dog pedigrees.

                                                                                                                                          The present invention relates to the human uncoupling protein 3 (mitochondrial, proton carrier) (UCP3) gene and polymorphisms. The polymorphisms are associated with obesity, especially diabetes mellitus associated obesity. They polymorphisms may be identified and analysed to determine whether an individual is susceptible to obesity and may be used as the basis for targeted design of drugs to treat obesity. The present sequence was used in the identification and amplification of UCP3
                                                                                                                                                                                                                                                                          Nucleic acids encoding uncoupling protein 3 (mitochondrial, proton carrier) (UCP3) proteins comprising single nucleotide polymorphisms, useful for the design of drugs for treating obesity.

The specification describes NIT1 sequences. The human and mouse NIT1 genes are members of an uncharacterised mammalian gene family with homology to bacterial and plant nitrilsses. The tumour suppressor gene FHIT in D. melanogaster and C. elegans code for fusion proteins in which the Fhit domain is fused with a Nit domain. In mouse and humans, FHIT and NIT are encoded by two different genes, localised on chromosomes 3 and 1 in human and 14 and 1 in mouse. The human FHIT gene at chromosome 3p14.2, spanning the constitutive chromosomal fragile site FRA3B, is often altered in most common forms of human cancer. The Nit1 protein overcomes the mutated inactivation of the genome alleles. The NIT1 genes, encoded polypeptides, derivatives and analogues of them, and antibodies are used as diagnostic and therapeutic reagents for the detection and treatment of cancers

FEXEXOCOCOCXS
                                                    The present sequence represents a primer used in the isolation of a derived serine protease. The present invention also describes a tick salivary gland antigen related immunogen and a tick derived cysteine protease. A nucleotide sequence encoding any of the above proteins of used in a vaccine against tick carried infections for domestic animal used in a vaccine against tick carried infections for domestic animal
                                                                                                                                                                                                 A'gene encoding tick salivary gland antigen - useful as a vaccine protecting animals from tick-carried infections.

The specification describes a pharmaceutical composition that comprises natural killer T cells (NKT) activated by a phosphatidylinositol mannoside (PIM), and a carrier. Activation of NKT by PIM induces a granulomatous-type response, particularly a mucosal response in the case of bacterial infections. This activation is independent of the CD1/T cell receptor pathway and is based instead on the inate immunity mediated by CD14 and bases the response to Th1 type. It is relatively specific, implying an oligoclonal distribution (contrast the polyclonal activation induced by ceramides). NKT are the only Valpha14+T cells that infiltrate granulomatous lesions. The compositions, and/or PIM alone, are used to treat diseases where a granulomatous-type immune response is desired, particularly bacterial infection (especially where caused by

transmitters, defensine, growth factors, vasoactive peptides and receptors, binding proteins and malignancy associated proteins. The antisense oligonucleotides may be used in this way to treat disorders including respiratory obstruction (especially pulmonary obstruction and/or bronchoconstriction) and/or lung inflammation, allergy(ies) and/or surfactant hypoproduction which are associated with a disease or condition selected from pulmonary vasoconstriction, inflammation, allergies, asthma, impeded respiration, respiratory distress syndrome (RDS), pain, cystic fibrosis (CP), allergic rhinitis (AR), pulmonary hypertension, emphysema, chronic obstructive pulmonary distress syndrome pulmonary transplantation rejection, pulmonary infections, bronchitis, and/or cancer. AAF18434 to AAF21543 represent human polynucleotide fragments and antisense oligonucleotides used in the exemplification of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                   immunosuppressive, antiasthmatic, hypotensive and cytostatic activities. The antisense oligonuclectides and (I) can be used to down-regulate the expression and or activity of target polypeptides associated with lung/respiratory disorders and malignancies, such as stimulating and activating peptide factors and transmitters, transcription factors, immunoglobulins and antibodies, antibody receptors, cytokines and chemokines, endogenously produced specific and non-specific enzymes, binding proteins, adhesion molecules and that receptors, cytokine and bending proteins, adhesion molecules and that receptors, cytokine and

                                                                                                                                         AAZ65654 to AAZ69578 represent human biallelic markers from the present invention, which contain a polymorphic base at position 24 of their nucleotide sequences. AAZ69579 to AAZ7440 represent amplification primers for the biallelic markers. The biallelic markers of the invention have a variety of uses: they can be used for high density mapping of the human genome, and in complex association studies and haplotyping studies which are useful in determining the genetic basis for disease states. Compositions and methods of the invention can also be useful for the identification of the targets for the development of pharmaceutical agents and diagnostic methods, as well as the characterisation of the differential efficacious responses to and side effects from pharmaceutical agents acting on a disease as well as other treatment.                                                                                                                                                                                                                                                                           AAZ65654 to AAZ65578 represent human biallelic markers from the present invention, which contain a polymorphic base at position 24 of their nucleotide sequences. AAZ65579 to AAZ7440 represent amplification primers for the biallelic markers. The biallelic markers of the invention have a variety of uses: they can be used for high density mapping of the human genome, and in complex association studies and haplotyping studies which are useful in determining the genetic basis for disease states. Compositions and methods of the invention can also be useful for the identification of the targets for the development of pharmaceutical agents and diagnostic methods, as well as the characterisation of the differential efficacious responses to and side effects from pharmaceutical agents acting on a disease as well as other treatment.

AAA61494
samples. The method comprises performing a nested PCR to amplify a target nucleotide sequence in a purified sample nucleic acid mixture. In the first stage of the nested PCR, a 674 bp region of the Pseudorabies virus gII gene (AAA61490), which encodes a glycoprotein essential for viral replication is amplified. An aliquot of the first stage PCR mixture is then removed and a second target region contained within the 674 bp region is amplified in the second stage of the nested PCR. The first and second stage PCR products which will indicate the presence of the virus in the sample. The nested PCR primers are salected from the 674 bp region. The outer, first stage PCR primers are AAA61491 (upper primer) and either AAA61492 or AAA62493 (lower primers), and the inner, second stage PCR primers are selected from the 674 bp region. The outer, first stage PCR primers are AAA61491 (upper primers) and one selected from AAA61497-A61500 (lower primers). The method of the invention is useful for detecting pseudorables in a sample suspected of being infected with the virus. The pseudorables virus causes a disease which is generally fatal to young pigs. Those which survive become

SEQ 18 NO:11 to 1680 (AAA32323 to AAA33992) are specifically claimed ONs from the present invention. N.B. Sequences given in the disclosure of the present invention do not match up with their corresponding SEQ ID NO: sequences given in the sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Claim 1c ii; Col 8; 16pp; English

The method allows for greater detection of the virus in the latent state, particularly within tonsillar tissues, before visible signs of the viral disease are evident or after visible signs of the disease have dissipated. Sequences AAA61491-A61500 represent the PCR primers which may be used in the method of the invention. The present sequence represents an inner upper PCR primer which may be used in the second stage of nested PCR
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Sequence

map of the human genome Novel biallelic markers used to construct a high density disequilibrium

Claim 9; Page 2533; 2745pp; English

identification of the targets for the development of pharmaceutical agents and diagnostic methods, as well as the characterisation of the differential efficacious responses to and side effects from pharmaceutical agents acting on a disease as well as other treatment.

N.B. The SEQ ID NOs 2852, 2913, 2974, 3035, 3096, 3157, 3227, 3227 and AAZ65654 to AAZ69578 represent human biallelic markers from the present invention, which contain a polymorphic base at position 24 of their nucleotide sequences. AAZ69579 to AAZ77440 represent amplification primers for the biallelic markers. The biallelic markers of the invention have a variety of uses: they can be used for high density mapping of the human genome, and in complex association studies and haplotyping studies which are useful in determining the genetic basis for disease states. Compositions and methods of the invention can also be useful for the 3367, are not actually given a sequence in Listing

RESULT 1712
AAZ06610/c
               PCR primers AAZ06609-Z06610 are used to amplify the human ELK-1 sequence CAAZ06608. Human ELK-1 also known as p6270F is member of the ternary Complex factor subfamily of Ete-domain transcription factor proteins. Antisense polynucleotides targeted to the ELK-1 nucleic acid molecule CAAZ06571-Z06607 inhibit the expression of ELK-1. Sequences AAZ06571-Z067 all cause at least 30% inhibition of ELK-1. Sequences AAZ06571-Z067 all cause at least 30% inhibition of ELK-1 expression of human ELK-1 in human cells or tissues in vitro. ELK-1 uses a bipartite recognition mechanism mediated by both protein-DNA and protein-protein interactions to regulate genes by direct and indirect DNA binding and has been shown to control various signal transduction pathways and other cell functions including apoptosis. This means that antisense compounds inhibiting expression of ELK-1 can be used to treat diseases associated with its expression in animals, particularly humans and to prevent or delay
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        for detection and gene therapy for breast and ovarian cancers. They can be used in methods for monitoring disease progression, for determining patients suited for gene and protein replacement progression, or for detecting the presence or quantifying the amount of a tumour growth inhibitor following such therapy. The BRCA2 protein, polypeptides, their functional equivalents, antibodies, and PNs may also be useful in the study of the characteristics of BRCA2 proteins, such as structure and function of BRCA2 in oncogenesis or subcellular localisation of BRCA2 protein in normal and cancerous cells. AAX33001 to AAX33097 represent PCF primers used in the amplification of the human BRCA2 gene
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Antisense compound disease associated
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          AAZ06610 standard; DNA; 21
                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Example 13;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           17-DEC-1998;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    17-DEC-1998;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        SXC
     The present invention describes a new composition comprising an antisense coligonucleotide (ON) with low adenosine (up to 15%), which targets nucleic acids involved in bronchoconstriction, allergies, and/or controlled involved in bronchoconstriction, allergies, and/or antiasthmatio. The ON can have antiinflammatory, antiallergic, antiasthmatic, cytostatic and analgesic activities. The compositions are useful for the treatment of diseases associated with inflammation, controlled in the secondary disease and diseases whose secondary effects afflict the lungs of a subject. They can be used for treating cofficients, inchaemic conditions, pulmonary vasconstriction, allergies, asthma, impeded respiration, respiratory distress syndrome, pain, cystic fibrosis, pulmonary hypertension, emphysema, chronic obstructive pulmonary disease (COPD), and cancers such as leukaemias, lymphomas, carcinomas, and cancers which may metastasise to the lungs, including the breast and prostate cancer. The reduction of the adenosine content of the conchoconstriction and inflammation. AAA33312 represent the prochaese of decyyadenosine which activates adenosine receptors causing bronchoconstriction and inflammation. AAA33312 represent the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      course of the invention to produce the retroviral packaging plasmids of the specification, which are used in methods for transduction of mammalian target cells with foreign genes. The methods and products can be used for the highly efficient transduction of mammalian cells, considering the production of mammalian cells.

C particularly for human gene therapy. The methods and products provide novel optimised transient expression plasmids (designated KAT) for production of retroviral virions in which high steady state levels of retroviral packaging functions and packageable vector transcripts are produced following introduction of KAT plasmids into mammalian cells capable of efficient transient transfection and expression, in the absence of plasmid replication enables production of high titre virions while minimising the potential for production of high creplication competent retrovirus by recombination
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Query Match

The present primer is used as a PCR primer and a probe in the course o the invention, to create the vectors described in the specification. T specification describes a retroviral vector pDRTD4.2 for transduction mammalian cells. The vector comprises, in the 5' to 3' direction, a modified 5' Moloney murine leukemia virus (MMLV), long terminal repeat
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          defective vectors in cells

```

The present invention describes genomic DNA which contains a BRCA2 gene where the first 12 nucleotides beginning exon 5 are 5 TCCTCTTGTTCT-3' at in sequence (I) (see AAX)3249), where nucleotides numbers 5782-5790 are GTTTGTGTT as in sequence (IV) (see AAX)3255), and where the last 20 nucleotides encoding exon 15 are 5'-CTGCGTGTTCCATAAACAG-3' as in sequence (II) (see AAX)30251) and the first 20 nucleotides beginning exor 16 are 5'-CTGTATACGTATCGCGTTTC-3' as in sequence (III) (see AAX)30253). Products and methods from the present invention can be used for identifying mutations in the BRCA2 gene leading to predisposition or higher susceptibility to breast or ovarian cancer. They can also be used

used

exon

86

New coding sequence haplotypes of the human products for determining susceptibility to,

BRCA2 gene - used to develop detection and treatment of

or ovarian cancer.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The invention relates to methods of determining a functional allele CC profile of a gene in a population. Functional allele profiles comprise the commonly occurring alleles in a population, and the relative CC trequencies at which such alleles of a given gene occur. The methods are CC used to identify and determine the frequency of the functional alleles of genes which display extensive allele to heterogeneity, particularly those CC implicated in disease or conditions, such as the BRCAl gene associated CC with breast cancer, CFTR associated with cystic fibrosis, dystrophin CC associated with Duchenne muscular dystrophy and Becker muscular CC dystrophy, and p53 associated with Li-Fraumeni syndrome. The methods can CC also be employed for diseases where allelic and genetic heterogeneity can be employed for diseases where allelic and genetic heterogeneity conjugosis colorectal cancer. Identification of functional alleles is concessary for identification of functions which may be implicated in the CC disease. Sequences ANX32001-172 represent primers for determining the CC genes such as MSH2 gene, MLH1 gene, BRCAl gene, BRCA2 gene and BAP1 gene
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Best

The novel NBC protesins and nucleic acid sequences may be used to treat pathological processes including water retention, increased blood pressure, chronic respiratory and metabolic acidosis, inflammation, cell proliferation, cancer, sperm activation/inactivation, hydroencephaly, epilepsy, glaucoma and colliss. Members of the NBC family of proteins can be used (i) as a target to identify agents that block or stimulate NBC mediated pH regulation, (ii) as a target or bait to identify and isolate binding partners that bind NBC, (iii) in methods to identify agents that block or stimulate activity of an NBC protein, and (iv) as a target to assay for NBC-mediated activity, useful in immunoassays for detecting NBC expression/activity and for murify an NBC antibodies are also useful as modulators of NBC activity, useful in immunoassays for detecting NBC expression/activity

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The specification describes antisense oligonucleotides (AAX52869-X55271) directed against at least 2 mRNAs selected from target genes, coding and non-coding regions of RNAs corresponding to target genes, gene initiation codons, genomic flanking regions, intron-exon borders, the 5'-end, the 3'-end and the juxta-section between coding and non-coding regions and all segments of RNAs encoding proteins associated with one or more diseases, conditions or mixtures. The antisense oligonucleotides may be derived from sequences AAX55272-74. These multiple target oligonucleotides (specifically AAX55180-271) can be used for the antisense treatment of diseases and conditions. Typical diseases and conditions are those associated with impaired respiration and inflammation, including lung diseases, pulmonary vasoconstriction, inflammation, allergic rhinitis, and the second conditions are those associated with impaired respiration and inflammation, allergic rhinitis, and the second conditions are those associated with allergic respiration and conditions are those associated with impaired respiration and inflammation, allergic rhinitis, and the second conditions are those associated with allergic respiration and conditions are those associated with impaired respiration and inflammation, allergic rhinitis, and the second conditions are those associated with a second conditions are those associated with a second conditions are those associated with a second condition and inflammation, allergic rhinitis, and the second conditions are those associated with a second condition and conditions are those associated with a second condition and conditions are those associated with a second condition and conditions are those associated with a second condition and conditions are those associated with a second condition and conditions are conditions and conditions are conditions and conditions are conditions and conditions are conditions are conditions and conditions are conditions and conditions are conditions and conditions are conditions a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      respiratory distress syndrome; pain; cystic fibrosis; pulmonary hypertension; pulmonary vasoconstriction; emphysema; chronic obstructive pulmonary disease; leukemia; lymphoma; carcinoma; colon cancer; breast cancer; lung cancer; pancreatic cancer; hepatocellular carcinoma; kidney cancer; melanoma; hepatic metastasis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  colon cancer, breast cancer, lung cancer, pancreatic cancer, hepatocellular carcinoma, kidney cancer, melanoma, hepatic metastases, as well as all types of cancers which may metastasize or have metastasized to the lungs, including breast and prostate cancer
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    acute asthma, allergies, asthma, impeded respiration, respiratory distress syndrome, pain, cystic fibrosis, pulmonary hypertension, pulmonary vasoconstriction, emphysema, chronic obstructive pulmonary disease (COPD), and cancers such as leukemias, lymphomas, carcinomas
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 New antisense oligonucleotides used in treatment of, e.g. pulmonary
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               17-SEP-1997;

                                                                                                                                                                                                                                                                                                                                                                                                                                          AAV73789-V73800 are PCR primers used in the analysis of the Kaposi's sarcoma-associated herpesvirus (KSFV) LUR (long unique region). The primers are used in a method which involves the isolation of a dihydrofolate reductase (DHFR) protein encoded by KSFV OFF 2. KSFV is a new human Herpesvirus (HHV8) believed to cause Kaposi's sarcoma (KS) which is the most common form of neoplasm occurring in persons with acquired immune deficiency syndrome (ALDS). The DHFR protein is useful for vaccination, prophylaxis, diagnosis and treatment of a subject with Kaposi's sarcoma and for detecting expression of a DNA virus associated with the result of the control of the cont
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Synthetic.
                                                                                                                                                                                                                                                                                                           Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Disclosure; Col 50; 109pp; English
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            diagnosis of Kaposi's sarcoma.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Kaposi's sarcoma-associated herpes virus di:hydro:folate reductase and is useful f

The specification describes KCNQ proteins. These are nervous system-specific potassium channels. In neurons, potassium channels regulate neuronal excitability, action potential shape and firing pattern, and neurotransmitter release. KCNQ modulators may be to treat disorders such as ataxia, myokymia, seizures, Alzheimer's disease, Parkinson's disease, age-associated memory loss, learning
                                                                                                                                                                       oligonucleotide can be used to treat HIV-1 or HIV-2 infection in a mammal, or inhibit HIV-1 or HIV-2 in a cell. The oligonucleotide has cell toxicity, provokes less immunostimulus than prior art, and is a rich antisense HIV oligonucleotide
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Human immu
infection;
                                                                                                                                            Sequence
                                                                                                                                                                                                                                                                              The present sequence represents a synthetic oligonucleotide sequence, antisense to a conserved gag region of the HIV-1 genome. The antisense
                                                                                                                                                                                                                                                                                                                                                       Claim 13; Page 63; 64pp; English.
                                                                                                                                                                                                                                                                                                                                                                                                                          New synthetic oligonucleotide sequences antisense to conserved gag region
                                                                                                                                                                                                                                                                                                                                                                                                                                                                             WPI; 1999-228890/19

                                                                                                                                                                                                                                       The present sequence represents a synthetic oligonucleotide sequence, antisense to a conserved gag region of the HIV-1 genome. The antisense oligonucleotide can be used to treat HIV-1 or HIV-2 infection in a mammal, or inhibit HIV-1 or HIV-2 in a cell. The oligonucleotide has less cell toxicity, provokes less immunostimulus than prior art, and is a GC-rich antisense HIV oligonucleotide

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    This oligonucletide is complementary to a portion of DNA sequence (see CAN71743) coding for the P30/PHAPI (see AAN84053) of the newly identified C V3 loop HIV receptor. It is used as a sense primer, together with an C antisense primer (see AAV71752) in a PCR amplification of P30/PHAPI C reverse-transcribed mRNA. The V3 loop HIV receptor consists of an C association of 3 proteins, named P95/nucleolin, P40/PHAPI and P30/PHAPI C (see AAN84052-54). A method for screening molecules that modulate the CC expression of the receptor comprises: cultivating cells transfected with C a nucleotide sequence encoding P95/nucleolin, P30/PHAPI or P30/PHAPII, C placed under the control of its own promoter; bringing the cells into C contact with a test molecule; and quantifying expression of the C P95/nucleolin, P30/PHAPI or P40/PHAPI e.g. by quantitative PCR using the C P95/nucleolin, P30/PHAPI or P40/PHAPI e.g. by quantitative PCR using the CC primers provided (see AAV71749-54). Active molecules that have the CC ability to alter and/or prevent the binding of the HIV receptor to the CF the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Query Match

Ohasi C,
                   Identifying compounds which modulate expression of nucleic acids, provide compounds having defined physical, chemical or bioactive properties, e.g. antisense activity.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        New isolated V3 loop HIV receptor - comprises P95/nucleolin, P40/PHAPII and P30/PHAPI proteins, used to develop products for the treatment and prevention of HIV infection.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Identification; genetic target; gene modulation; human; antisense oligonucleotide; phosphorothioate; PCR primer; nucleotide sequence-based technology; antisense drug dir
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Human ELK-1 PCR reverse primer SEQ ID NO:203.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  AAZ41051;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            AAZ41051 standard; DNA; 21

CC the expression of a target nucleic acid (tNA) sequence via binding of the compounds with the tNA sequence. The method comprises generating a CC library of virtual compounds in silico according to defined criteria, and CC evaluating in silico the binding of the virtual compounds with the tNA coording to defined criteria. Also described are: (1) a method of CC defining a set of oligonucleotides (ONS) that modulate the expression of CC a tNA sequence via binding of the ONS with the tNA sequence comprising GC generating a library of virtual compounds in silico according to defined criteria, and evaluating in silico the binding of the virtual ONS with the tNA sequence comprising CC compounds that modulate the expression of a tNA sequence via binding of the compounds that modulate the expression of a tNA sequence via binding of the compounds with the tNA. The methods can be used for the generation CC and identification of synthetic compounds having defined physical, CC chemical or bioactive properties. Information gathered from assays of cuch compounds is used to identify nucleic acid sequences that are CC tractable to a variety of nucleic sequence-based technologies, e.g. antisense drug discovery and target validation. PCR utilising a series of primers (see AAV32721-34) was used to isolate overlapping GST-pi DNA segments from SuperCos-GST-pi clone, a genomic library of human glioblastoma multiform cell line MGR-3 genomic DNA. The products were used to determine the full-length sequence (see AAV32717) of the GST-pi gene. Novel methods for the diagnosis, prevention and treatment of tumours, are based on the differential involvement of variant forms of GST-pi (see AAW49013-14)

The vector comprises the double-stranded DNA molecule and at least one oligonuclectide that is linked to a targeting system and can form a triplex with a specific sequence within target cell or tissue. This sequence represents an example of an oligonuclectide able to form a triple helix with the target DNA. The vector is used to deliver therapeutic DNA (including antisense sequences or ribozymes) for gene therapy, e.g. sequences that encode enzymes, blood factors, hormones, tumour suppressors, also antigenic peptides for use as vaccines or immunotherapeutic agents for control of microbial or viral infections, or

The products and methods can be used in the diagnosis, prevention and treatment of LOH disorders, e.g. cancers, atherosclerotic plaques, premalignant metaplastic or dysplastic lesions, benign tumours, endometriosis, polycystic kidney disease, and graft versus host disease. The method can also be used to remove malignant cells from bone marrow transplants. ARZ25812-Z26825 represent

                                                                                                                                                                                                             interferon regulatory factor 1; (d) complement-binding protein; glycoproteins B, M or L; (d) capsid protein IV encoded by ORF65; and (e) immediate early protein encoded by ORF73. Labelled probes for the nucleic acid, proteins encoded by it, and antibodies (Ab) specific for the proteins are useful for detecting HHV8; specifically for diagnosis of Kaposi's sarcoma, in body fluids or tissue samples. HHV8 infections can be treated with antisense or triplex forming molecules or agents that bind specifically to the protein. Ab may be used for prophylaxis or treatment of HHV8 infection, while the protein can be used in protective vaccines. Ab may also be used to differentiate between lymphomas, and
                                                                                                         HHV8 may be implicated in many other lymphoproliferative diseases such as lymphomas, leukaemia, splenomegaly and mycosis fungoides. Cells and animals containing the nucleic acid are useful for drug screening. HHV8-derived paptides can be used as targets for antiviral drugs, e.g. dihydrofolate reductase gene can be inhibited with methotrexate. These can be used to be inhibited with methotrexate.
                                                                                                                                                                                                                                                                                                                                                                                                             This sequence is a primer for DNA encoding the Kaposi's sarcoma-
associated herpes virus (KSHV) macrophage inflammatory protein II (MIP
associated herpes virus 8 (HHV8). The amplified
I). KSHV is also known as human herpes virus 8 (HHV8). The amplified
sequence is an example of the DNA of the invention which encodes a KSHV
polypeptide selected from: (a) viral MIP II; (b) viral IL-6; (c) viral
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          New nucleic acid encoding Kaposi's sarcoma associated herpes virus proteins - useful for, e.g. detecting levels of HHV8 in, and preparation
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Chang
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     05-SEP-1996

The inhibitor is CC precancerous condition, by administering to the patient having a CC precancerous condition, by administering to the patient a first allele CC specific inhibitor (ASI) targeted to an allele of a first essential gene present in cells of the precancerous condition, where the normal somatic CC cells of the patient are heterozygous for the first gene, the inhibitor CC cells of the patient are heterozygous for the first gene, the inhibitor CC cells of the population and targets only one allelic forms of the gene CC used in the diagnosis, prevention and treatment of LOH disorders, e.g. CC cancers, atherosclerotic plaques, premalignant metaplastic or dysplastic CC lesions, benign tumours, endometriosis, polycystic kidney disease, and CC graft versus host disease. The method can also be used to remove companies the more described in the method of the invention
                                                                                                                                                                                                                                                                Query Match
